

Cloud Services

Secure. Scalable. Cost effective.

The Evolver team supports small and mid-sized businesses, Fortune 500, government and non-profit industries with cloud services. Our subject matter experts utilize best practices to incorporate a cloud solution into your enterprise. We are agnostic in our approach and look for the best possible solutions with the end client always in mind. Currently, we specialize in Amazon Web Services (AWS) and Microsoft Azure platforms.

Managed Services Provider (MSP)

As a MSP, Evolver helps you manage and reduce the costs and risks associated with operating your own infrastructure by providing various levels of managed services support. These services allow you to focus on your business, and leave the IT management to us. Our services are flexible and scalable to afford clients different levels of support based on your needs.

- 24/7/365 monitoring
- Dedicated technical support manager
- Proactive service methodology
- Minimal response time
- Software upgrades
- All resources are U.S. citizens, located in the U.S.

Professional Services

We offer a broad portfolio of professional services aimed at ensuring your successful deployment, adoption and use of the cloud.

Cloud Migration

We help our clients effectively migrate from inefficient and costly environments to dynamic, flexible cloud solutions. Evolver helps you understand the specific needs of each application and/or environment that will be migrated and develops a technical approach and plan to mitigate or eliminate as many risks as possible. And because we are agnostic, we help you choose the provider that is best for you. The options for cloud migration are:

- Physical-to-Virtual (P2V)
- Virtual-to-Virtual (V2V)

Disaster Recovery as a Service (DRaaS)

Evolver allows you to reduce the cost and burden of physical infrastructure and software needed for a remote disaster recovery site by providing DRaaS. This enables you to only pay for disaster recovery resources when they are required, not all of the time. Evolver works in conjunction with the client to determine recovery time and recovery points.

Storage Solutions

With a consultative approach, we assess your current environment and make recommendations that leverage existing investments and identify more efficient methods of storing your data using the cloud. In certain circumstances, a hybrid cloud solution is recommended and is becoming a business standard for firms that would like to retain some control of your enterprise.

Cloud Security

Cloud adoption demands a robust and comprehensive view of security. Evolver provides architecture, design, implementation and monitoring of a wide variety of security services for cloud-based solutions. In addition, we offer operating system, application and user level security. Services include:

- Continuous Monitoring as a Service (CMaaS)
- Penetration Testing
- Forensics
- eDiscovery
