

# Data Analytics

From very large government agencies to small litigation firms, we create data implementations that meet the needs of the users. We provide the complete cycle of collection, categorization, action and forensics of data for Federal and commercial clients. We scale our solutions to fit your exact needs. For example, we have provided cradle-to-grave data support including planning, architecting, consolidating, transitioning, and coordinating operations and analysis for a major financial institution.

## Big Data Implementations

Evolver provides the staffing and technical management necessary to execute small or large-scale, enterprise data analysis. Whether scanning paper archives, searching decades of emails, finding evidence in documentation, or identifying trends of user activities, Evolver can provide data analysis at the right size, cost and schedule to meet your needs. Evolver's big data implementations improve your bottom line.

## Enterprise Data Collection

Evolver has the expertise, knowledge and experience to solve problems with virtually any data type from forensics collections to pure data collections. We have broad experience in collections, from setting up capture centers and data centers across the country to conducting efficient, forensically sound data collections for investigations or litigation. We understand that developing an appropriate data collection plan is critical and helps control costs. We use industry leading technologies to collect all forms of data from every potential storage location- from laptops, computers and servers, to PDAs, mobile phones, and cloud storage. We also have experience developing custom solutions for collecting data from unusual locations.

## Records Management

We offer customized records management support so that you can store, manage and protect your most critical information. We design custom repositories of any size, and scale them to fit your organizational needs. Additionally, Evolver provides daily back-ups and exports for critical data.

## Structured Data Review

Reviewing structured data has become a huge challenge, databases can be enormous and as varied as the enterprises that use them. Evolver has a specific expertise in this area, and has developed SDreview to provide easy management and review of structured data, whether it is for our legal, commercial or government clients. We have the ability to collect, load, and process data from disparate systems into SDreview. Our expertise in database technologies provides our clients cost savings throughout the entire process.

## Modeling & Decision Support

Data is only effective if you can put it into action. From data modeling to visualization, we provide the tools and know how to empower data analysts. We help you develop Courses of Action (COA) and provide insight on the strengths and weaknesses of various options so that you can select the best action for your needs.

## Collaboration Solutions

Improve your workflow, optimize processes and reduce costs with Evolver's collaboration solutions. We help our clients connect and collaborate internally and externally. We have experience with complete Sharepoint development and deployment and other collaborative environments.

## Discovery, Redaction & Traceability

We identify and redact data for compliance, forensics, and historical review purposes. Our redaction capabilities can replace social security numbers, account numbers or other personally identifiable information (PII) from financial databases, electronic medical records, HR records, or any data set and add customizable placeholders. By anonymizing the data, more users/staff can access valuable information while complying with HIPAA and other data privacy regulations. Through identification and redaction, you can learn who accessed the data, if it was changed, and other key findings.
