

CYBER FOR THE C-SUITE

Evolver changes how organizations approach the cyber threat. Our Cyber Risk Ecosystem directly ties cyber expenditures to core business functions, reducing business risk and providing logical, defensible plans and actions that C-level staff can understand, implement, and measure.

In the most basic of terms, we:

- » Apply state of the art technologies to calculate business risk
- » Correlate the risk to quantitative dollars
- » Develop and implement plans to reduce the risk
- » Monitor internal and external environments

Just like other risk areas, our approach reduces the risk and impact of the cyber threat and provides measurable objectives for short- and long-term planning and evaluation.
