

## Convenient multi-factor authentication = improved protection to client data and systems using RSA SecurID Access

### CLIENT INDUSTRY

Financial and Legal Services

### PROBLEM

The client wanted to further secure access to corporate assets and:

- » Prevent the use of shared credentials, particularly elevated administrative credentials utilized by vendor personnel
- » Create a countermeasure to negate the impact of a stolen credential caused by a malicious attack
- » Deliver a method of secure access to all internal applications via a web-based portal accessible from anywhere in the world but not through VPN

### SOLUTION

Evolver recommends and implements RSA SecurID Access to deliver secure and convenient access for any user, from anywhere, to anything.

### BENEFITS TO CLIENT

- » Client now can provide a secure and convenient multi-factor authentication experience for their users.
- » Client is able to protect sensitive data and mission-critical systems.
- » Strengthened the login process by not only making it more complex, but also preventing the use of compromised credentials without the additional security step of possessing a security token.
- » Added an additional security layer to protect the company against phishing, social engineering, and password brute-force attacks. Secured logins from attackers exploiting weak or stolen credentials.
- » Integrates with on-premises, web-based, and cloud-based applications.

### Successful Implementation of RSA SecurID Access

- » Implemented RSA SecurID Access for Multi-factor Authentication.
- » Leveraged RSA SecurID hardware & software tokens, allowing users to have the option of authenticating with the help of an RSA smartphone app or the traditional hardware key fob.
- » Configured access policies to force all authentication to validate against an individual's assigned key token. Access without a validated token key becomes denied, even if the password is correct.
- » Governed access using context sensitivity policies that look at application type and user permission attributes.
- » Automated logging, monitoring, and incident creation of unauthorized access and failed authentication attempts.
- » Integrated RSA SecurID Access into the customer's web portal to allow users to authenticate and connect to internal applications from anywhere in the world.

#### Ready to Help You

Our work with RSA SecurID Access is just one example of our innovative cybersecurity solutions. Visit [www.evolverinc.com](http://www.evolverinc.com) to learn more.

#### About Evolver

Evolver is a technology company serving the government, commercial, and legal industries for nearly two decades. Specializing in cybersecurity, cloud, infrastructure, application development, end-user support, and legal technology services, Evolver addresses client challenges in the present and transitions clients to the future through the introduction of efficient and effective IT solutions.
