

Partner with Evolver for innovative and cost-effective eDiscovery

Expertise in Large & Complex Cases

- Design custom collection and review technologies
- Perform complex migrations of terabytes of data from proprietary databases, opposition productions, and legacy systems
- Manage hundreds of concurrent, worldwide active users
- Deliver multi-million document productions

Specialty with Native Files

4iG™ Suite via ELS

Should your case require the identification of key words, PII/PHI, or redaction of the same search term(s) across all native file types, Evolver utilizes a full native redaction application called 4iG. It offers de-duplication with the ability to search, identify, and redact all privileged data across all unique records. All productions are in native format; you no longer need to tiff or pdf before, during, or after the redaction process. This tool works directly with Relativity or as a standalone application.

—SERVICES

Forensic Collection & Preservation

Evolver conducts efficient, forensically sound data collection and investigations using a repeatable and defensible process. Our industry leading forensic collection tools give our team the ability to acquire data in an unobtrusive manner from a wide variety of devices, including smart phones, laptops, desktops, servers, and the cloud.

Processing

Our approach reduces the data collection and minimizes total project processing charges. Through dedupe and text extraction, the size of the data set is typically reduced from 20% to as much as 80%. The export will include our standard metadata fields plus any additional fields requested by the client.

Hosted Review

We utilize Relativity as our preferred data review platform because of built-in features such as viewer mode for improved document review speed, grouping relational documents for bulk tagging, email threading, persistent highlighting, and event handlers which reduce costs.

Evolver offers private, public and hybrid cloud hosting for our clients depending on your specific needs. Our private cloud is a robust and highly secure platform. Our relationships with leading cloud providers offer a secure, scalable and flexible public cloud hosting environment. And, for clients that require a blend of both environments, we offer a hybrid cloud solution.

Analytics

We offer Relativity Analytics for computer-assisted review, concept clustering, similar document detection, keyword expansion, and in-line concept search at no cost. Analytics increases productivity and reduces document review costs.

Managed Document Review

Our customized review services use case-specific review requirements and enable our clients to focus on critical case issues instead of painstaking document review.

Production

Evolver works closely with our clients to ensure all case-specific production instructions are well understood. We follow our standard quality processes to ensure no errors occur as mitigating the risks of rework and/or claw back issues are paramount to our production process.
